

Mavzu:

Suyuqlik  
mehanikasining  
elementlari

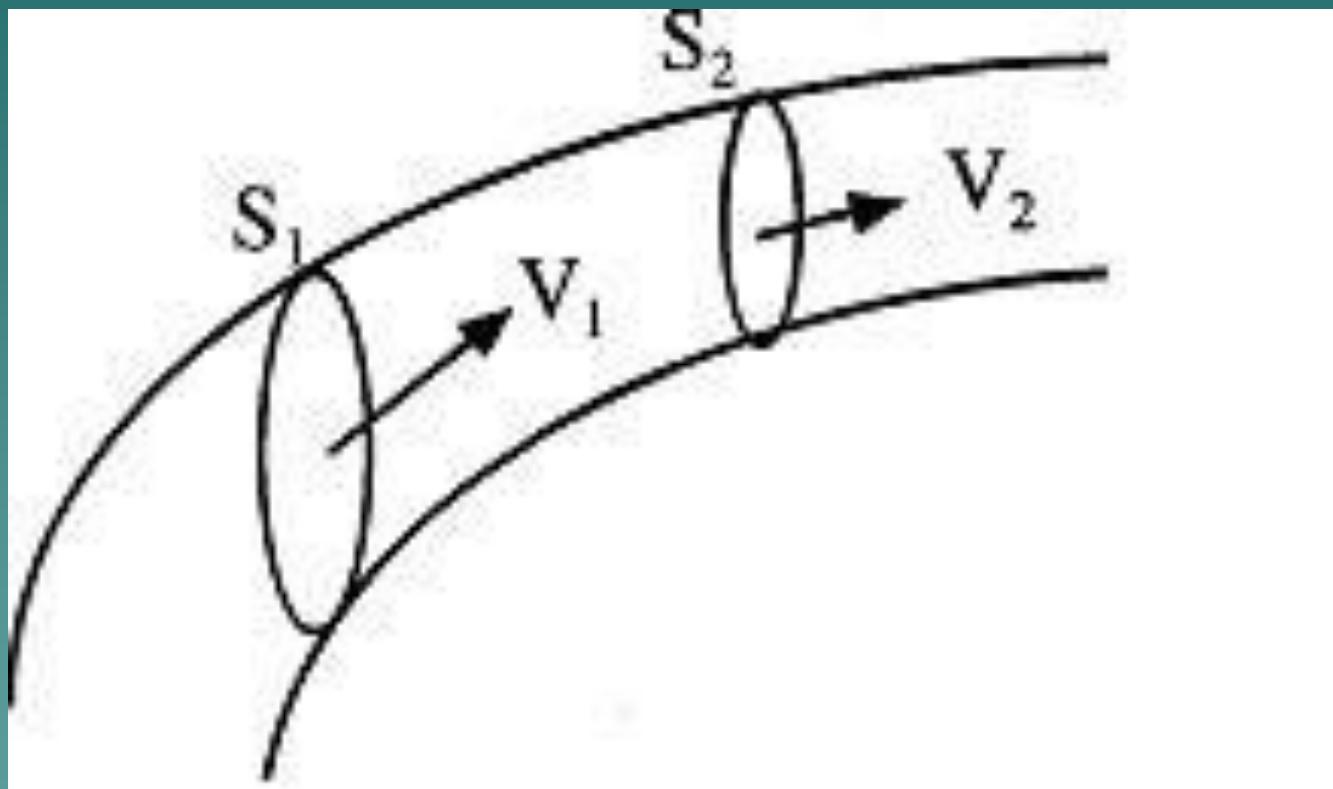

◆ Reja:

- 1) Oqim chiziqlari, oqim nayi
- 2) Uzuliksizlik tenglamasi
- 3) Bernuli tenglamasi

# OQIM CHIZIQLARI

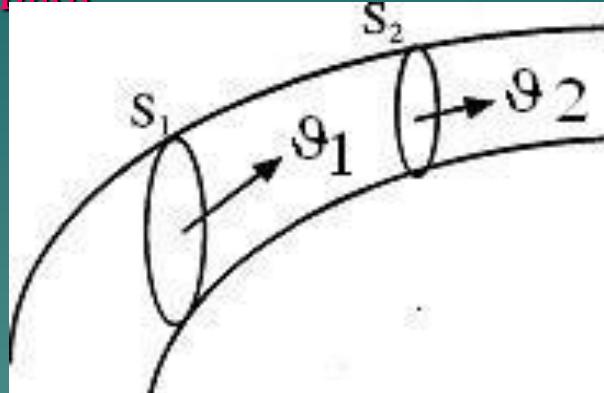

# Oqim nayi

## Oqim nayi (Оким найи)

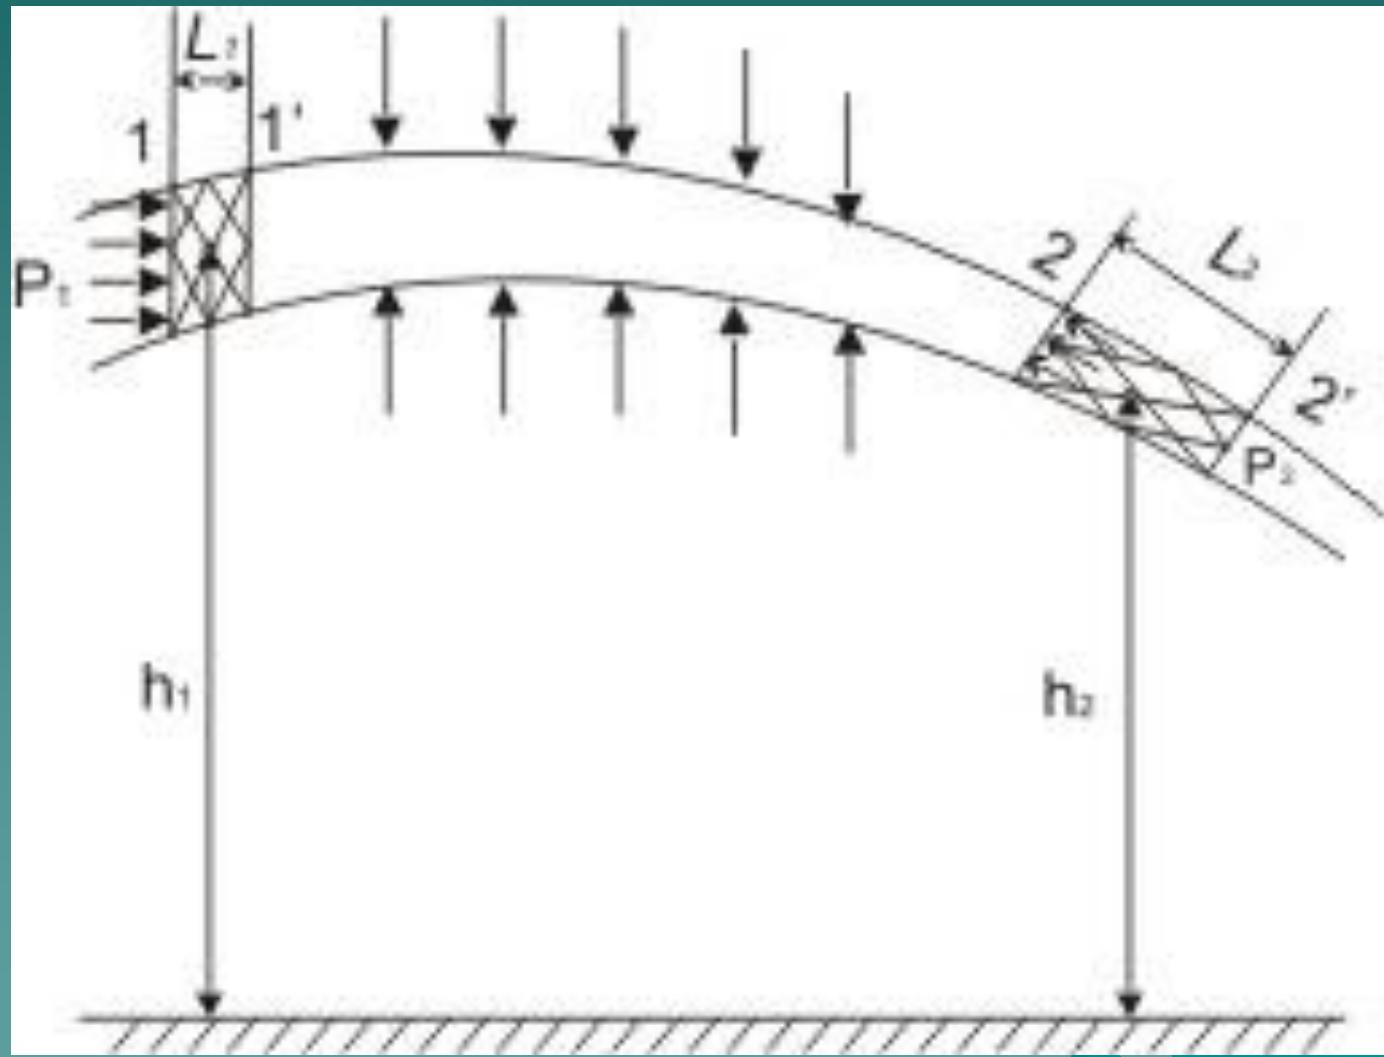

Suyuqlikning ikki oqim chiziqlari bilan chegaralangan qismiga oqim nayi deyiladi.

Agar vaqt otishi bilan oqim chiziqlarning joylanishi yoki shakli va uning har bir nuqtasidagi tezligi ozgarmasa bunday suyuqlik stasionar suyuqlik deyiladi

$$m_1 = \rho V_1$$
$$m_2 = \rho V_2$$
$$m_1 = m_2$$
$$\rho V_1 = \rho V_2$$
$$V_1 = V_2$$
$$S_1 v_1 = S_2 v_2$$
$$V = S l = S v t$$

Uzilmaslik tenglamasi

# Bernuli tenglamasi

# Bernuli tenglamasi

Energiyaning saqlanish qonuniga asosan tuliq energiyaning o'zgarishi tashqi kuch tasirida **m** massali suyuqlikni ko'chirishda bajarilgan ishga teng bo'ladi.  $E_2 - E_1 = A$  Ikkinci tomondan **S<sub>1</sub>** va **S<sub>2</sub>** ko'ndalang kesimlar orasidagi **m** massali suyuqlikni ko'chirilishda bajarilgan ish  $A = F_1L_1 + F_2L_2$  Bu erda  $F_1 = P_1S_1$  va  $F_2 = -P_2S_2$  manfiy ishora kuchning suyuqlik oqimiga qarshi yunalganligini bildiradi.

Tuliq energiya kinetik va potensial energiyalarning yig'indisiga tengdir.

$$E_1 = \frac{m\vartheta_1^2}{2} + mgh_1$$

$$E_2 = \frac{m\vartheta_2^2}{2} + mgh_2$$

Bu formulalarni yuqoridagi formulalarga qo'yksak quyidagi tenglamani hosil qilamiz.

$$\frac{m\vartheta_1^2}{2} + mgh_1 + p_1V = \frac{m\vartheta_2^2}{2} + mgh_2 + p_2V$$

Bu formulani hajmga bo'lsak va massani hajmga nisbati zichlik ekanligini hisobga olsak ( $\rho=m/v$ ), quyidagi tenglama kelib chiqadi.

$$\frac{\rho\vartheta_1^2}{2} + \rho gh_1 + p_1 = \frac{\rho\vartheta_2^2}{2} + \rho gh_2 + p_2$$

$$\frac{\rho\vartheta^2}{2} + \rho gh + p = const$$

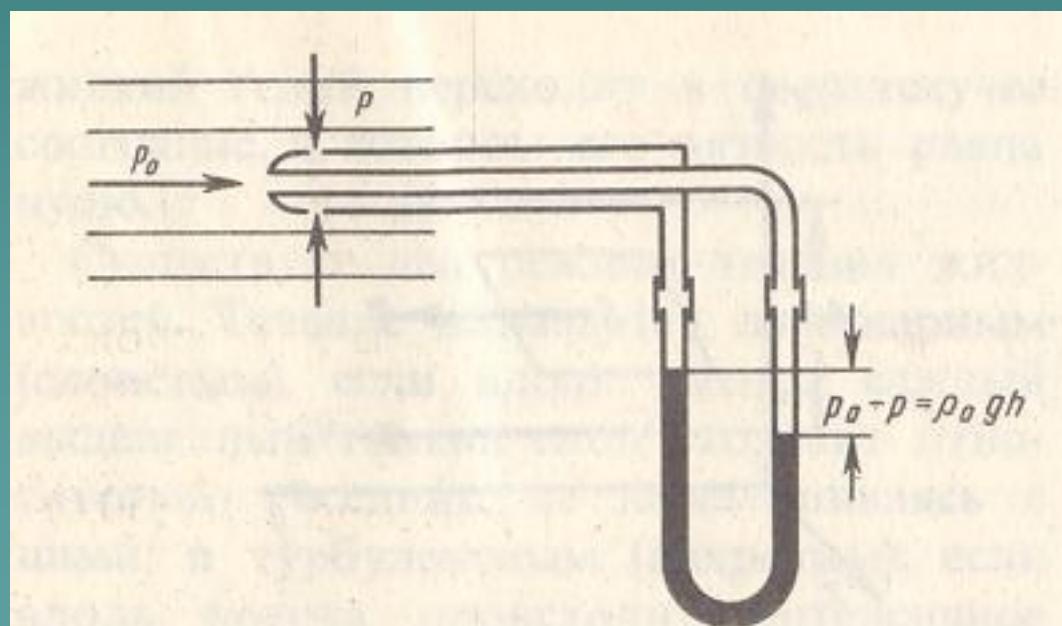

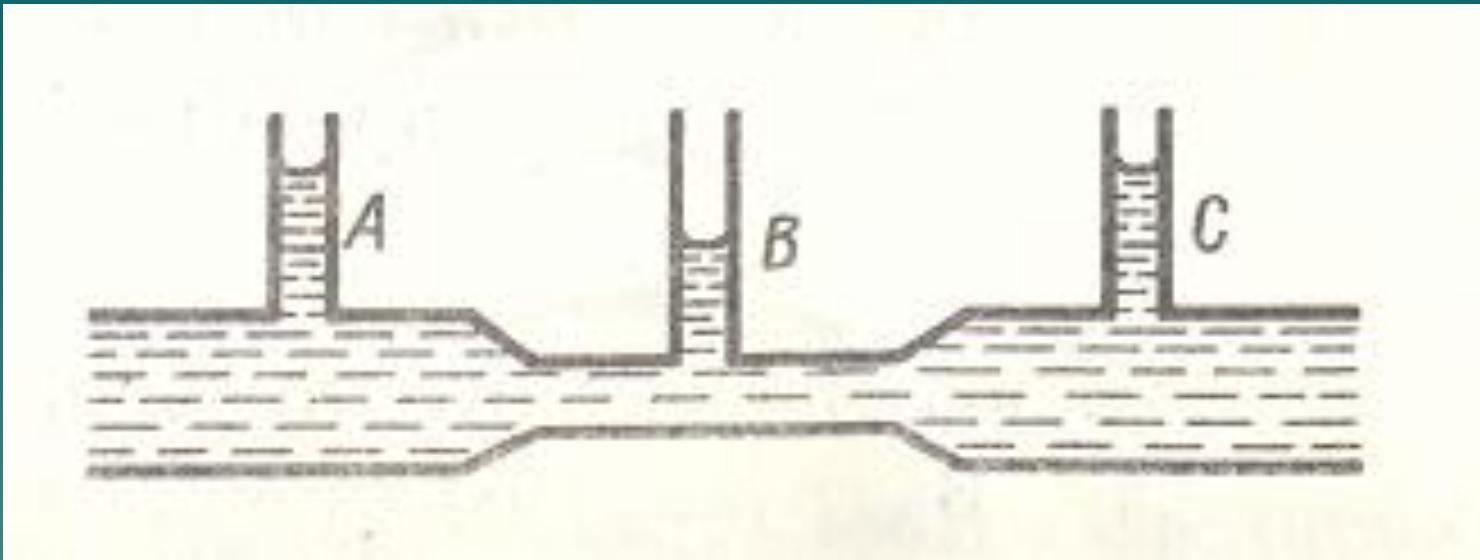

tenglamasidir.

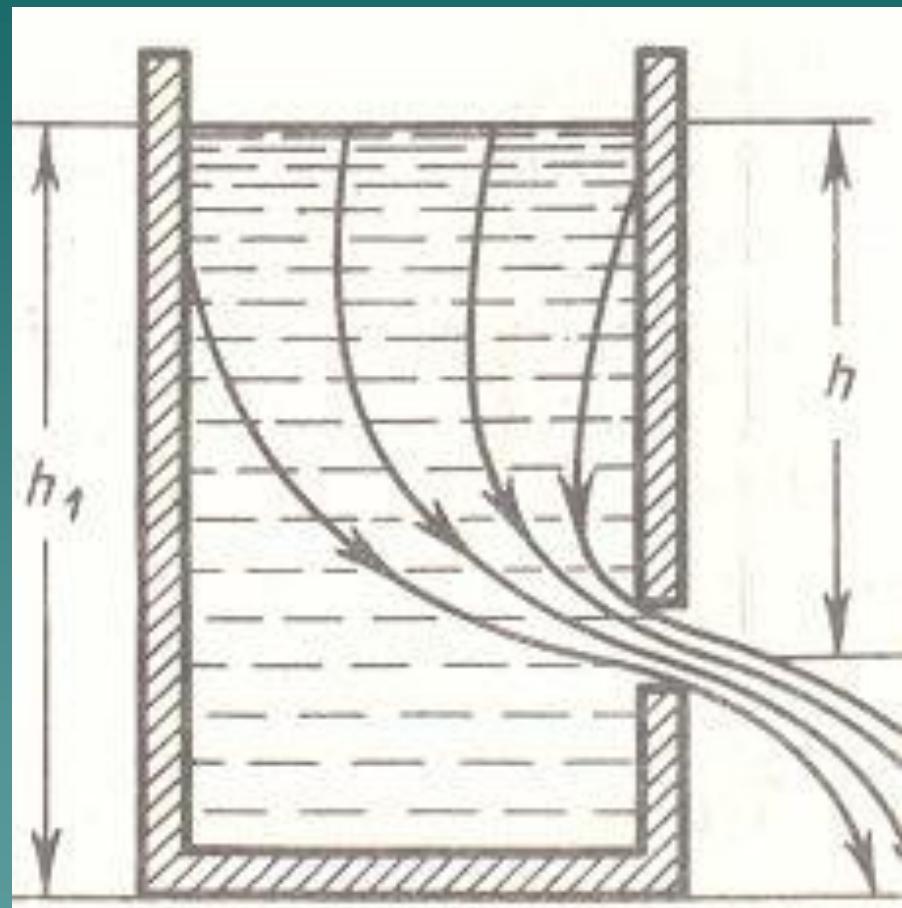

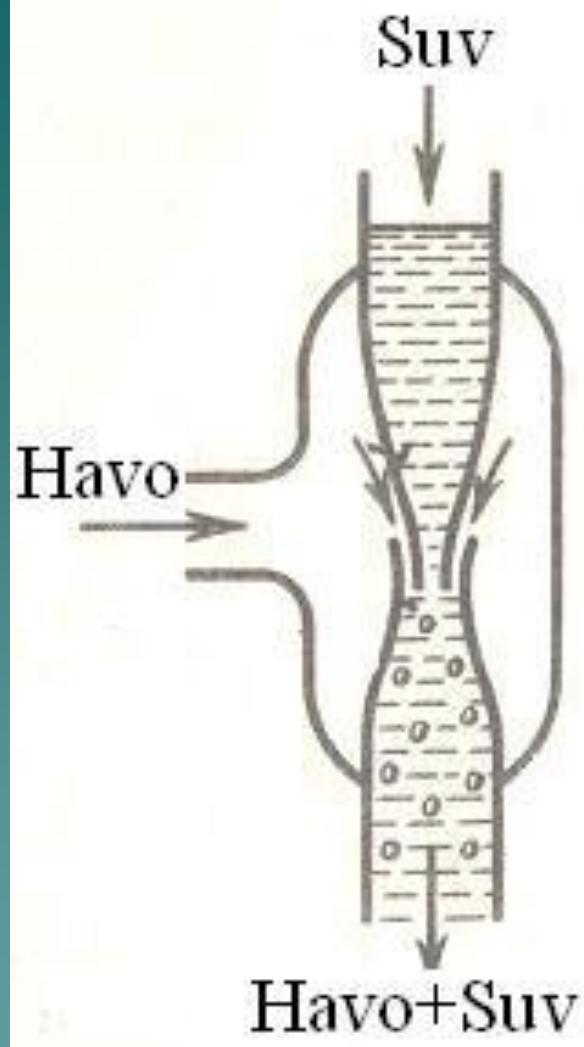

Bu tenglama BERNULLI

Bernulli tenglamasidagi:  $\frac{\rho g^2}{2}$  - gidrodinamik bosim

$\rho gh$  - gidrostatik bosim

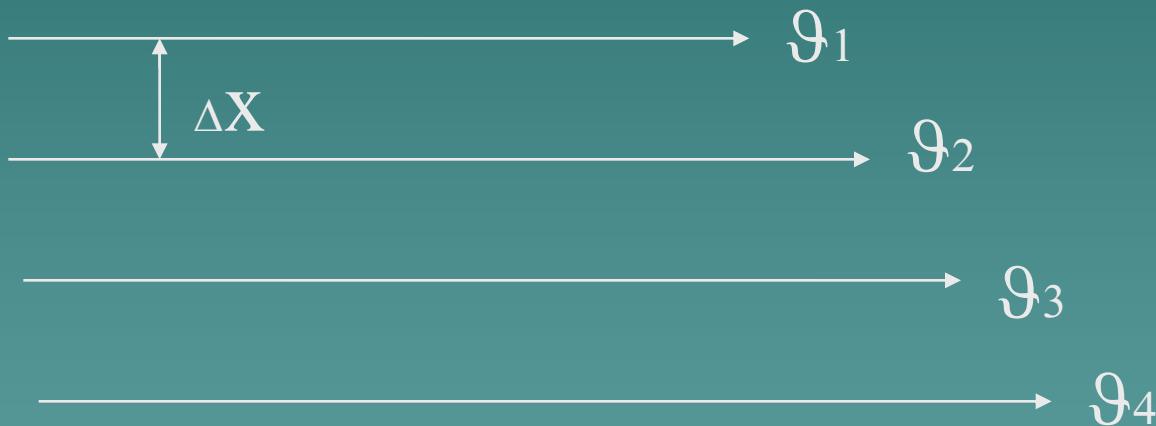

$p$  - statik bosim

# Laminar oqim

Suyuqlikning oqim chiziqlari qatlam-qatlam bolib bir biriga aralashmasa, bunday oqim laminar oqim deyiladi.

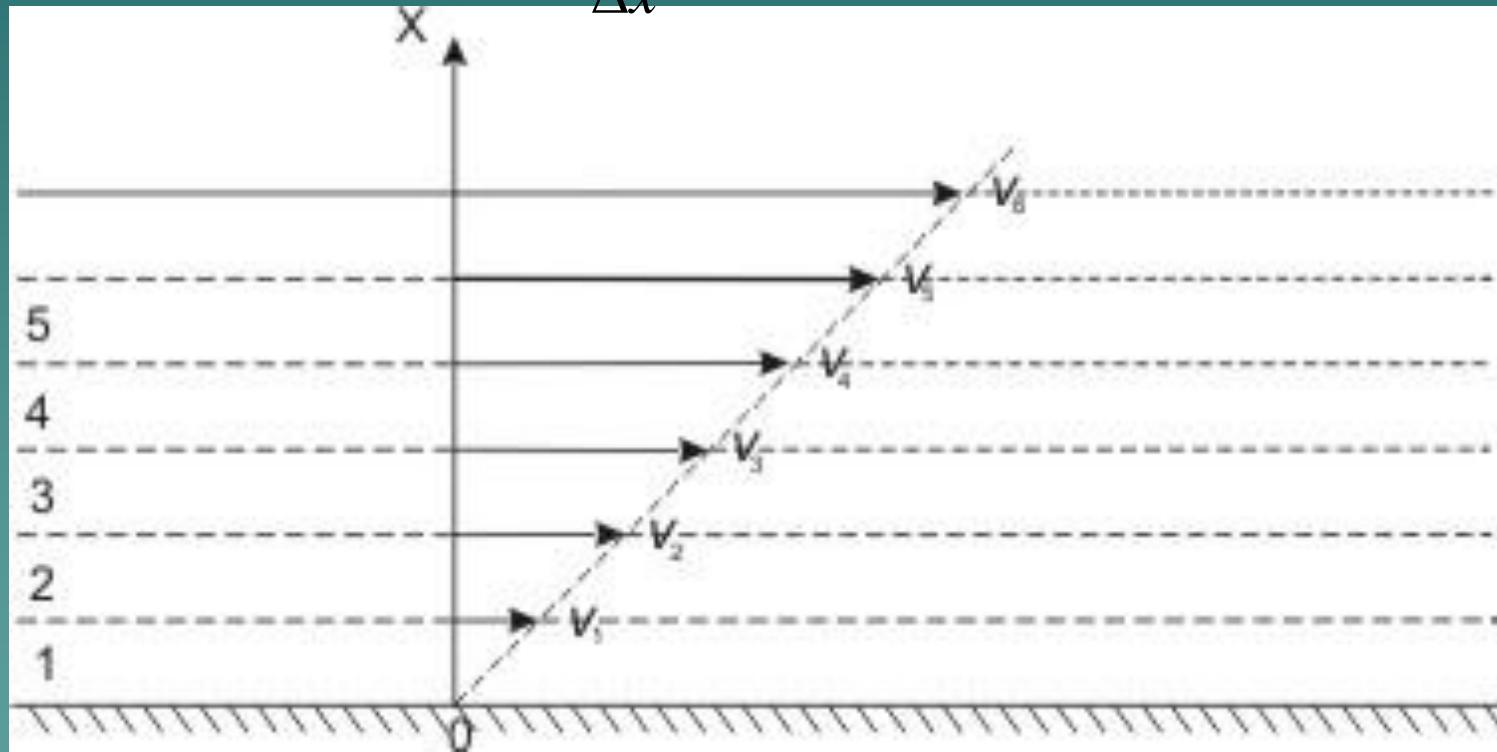

$$\frac{\Delta \vartheta}{\Delta x} \text{ -tezlik gradienti}$$

# Suyuqlikni qovushoqligi

$$F = \eta \cdot s \frac{\Delta g}{\Delta x}$$

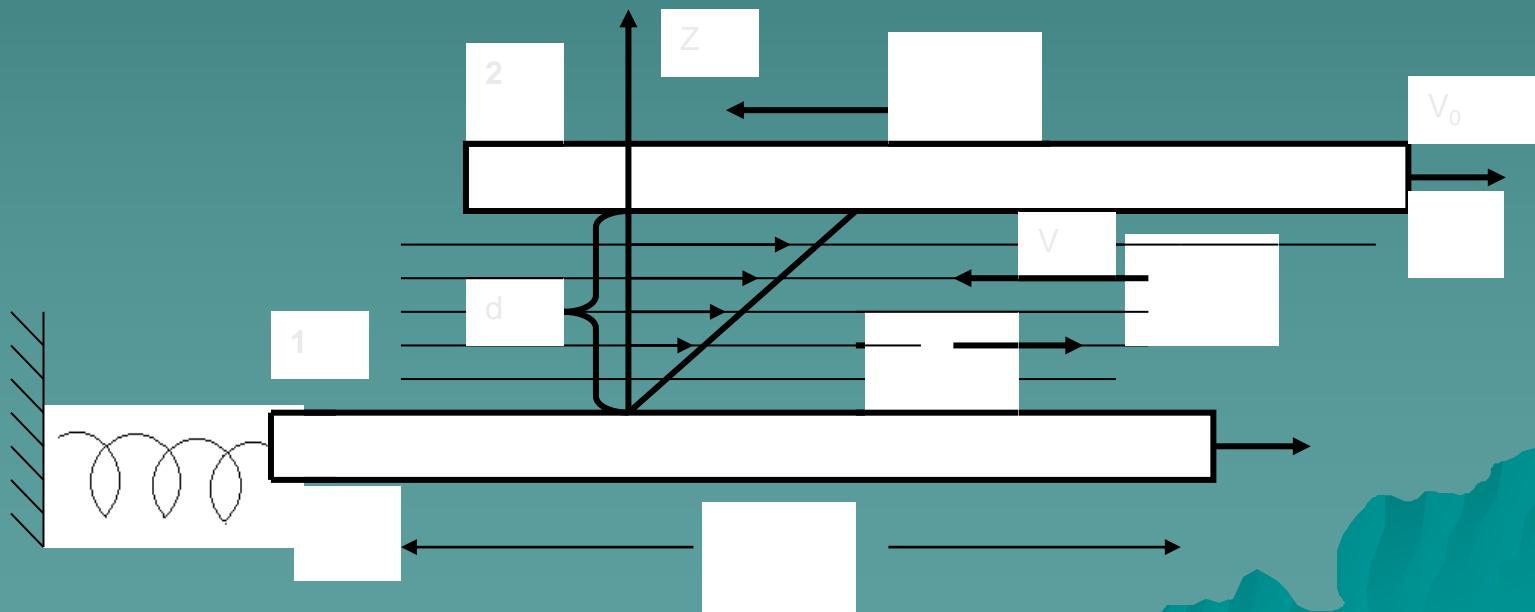

;  $\frac{\Delta g}{\Delta x}$  - Tezlik gradiyenti

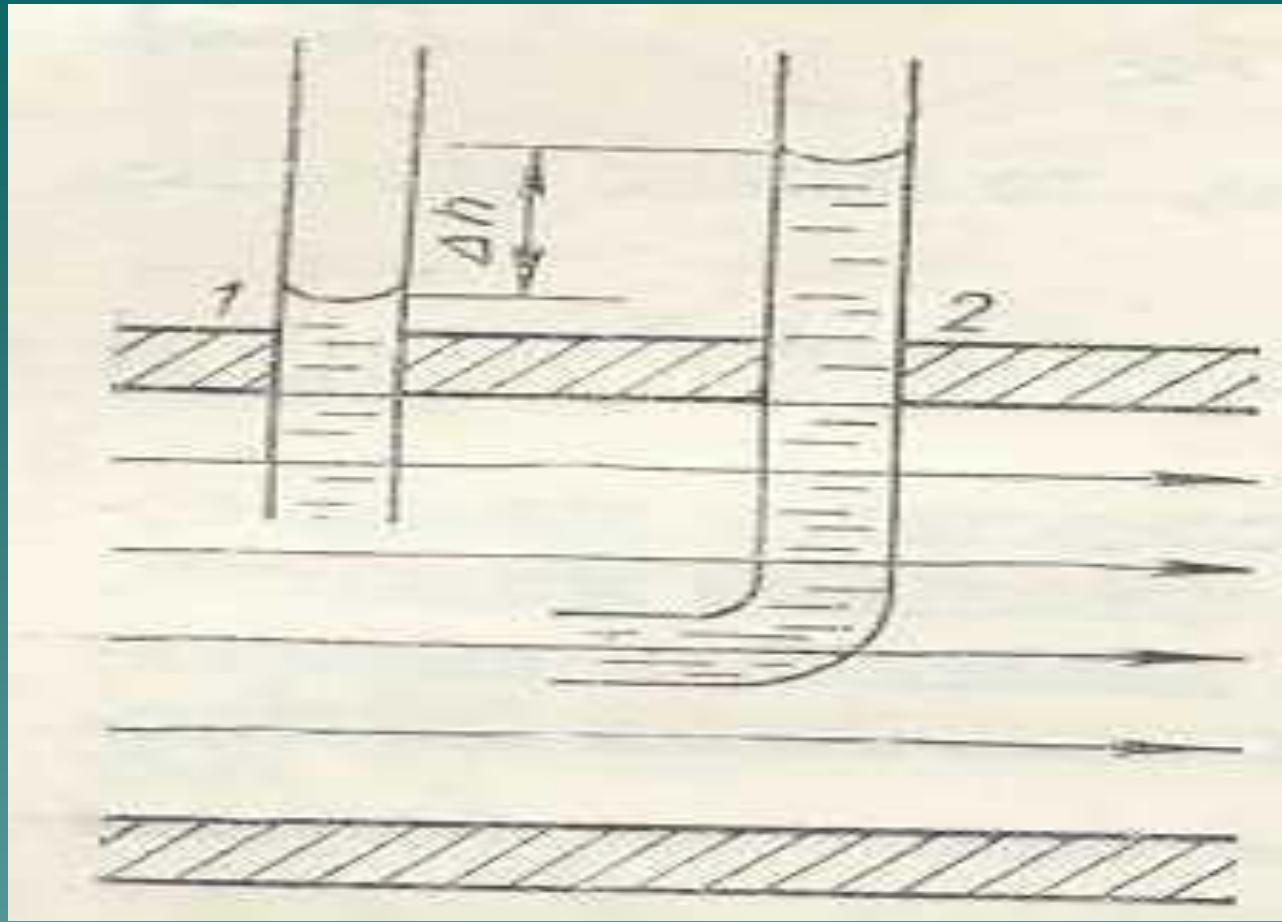

# Ichki ishqalanish kuchlari

$$f_{uu\kappa} = \eta \frac{v_0}{d} S$$

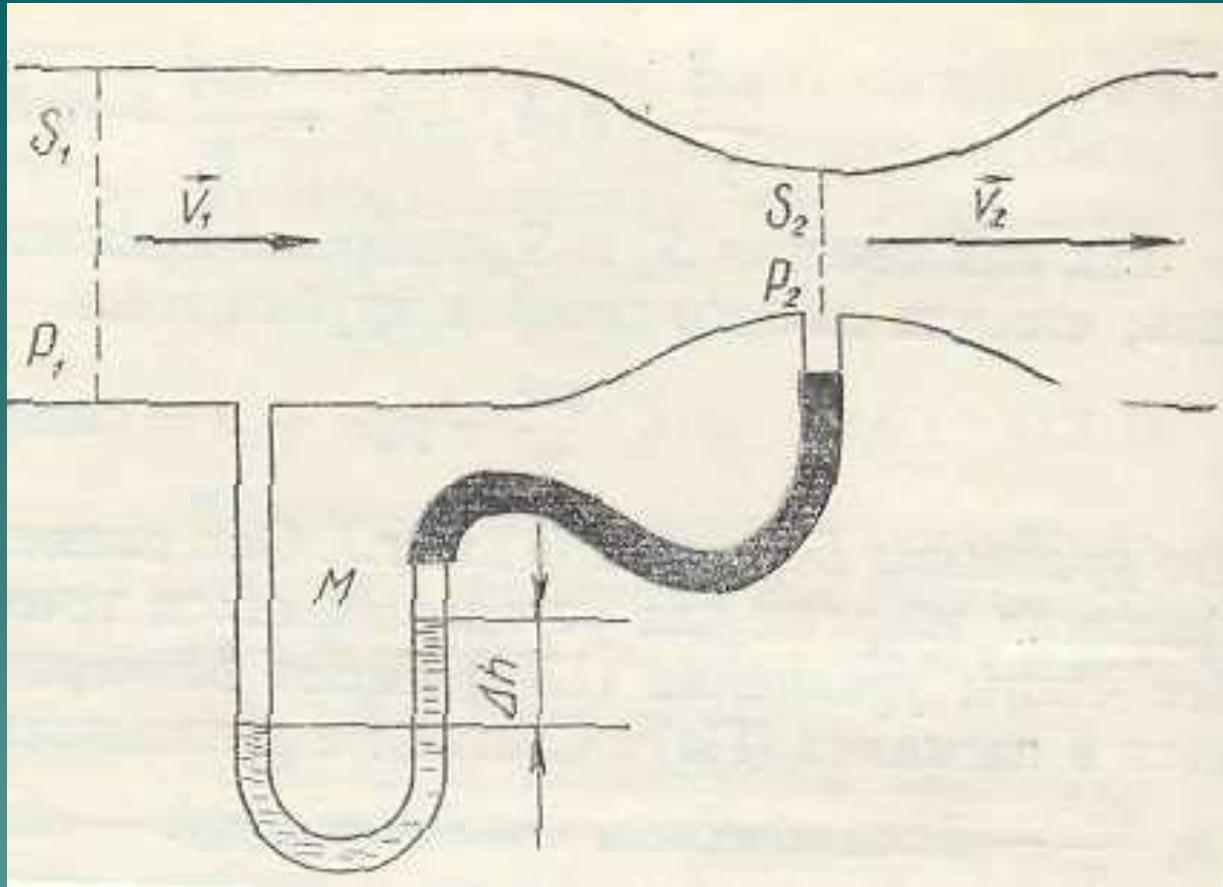

$\eta$  – ichki ishqalanish koeffisenti  
 $v_0$  - plastinkaning tezligi  
d - plastinkalar orasidagi masofa  
S - plastinka yuzasi

$$v = \sqrt{2g \cdot \Delta h}$$

Suyuqlikning tezligini o'Ichovchi asbob

$$Q = S_1 v_1 = S_1 S_2 \sqrt{\frac{2 \Delta \rho}{\rho (S_1^2 - S_2^2)}}$$

Suyuqlikning sarfini o'lichovchi asbob
