Fanning maqsadi va vazifasi

Fanning maqsadi: Suv va qishloq xo'jaligida foydalanilayotgan resurslarni maksimal tejagan holda yuqori samaradorlikka erishish.

Maqsadi: Qishloq xo'jaligi ekinlarini sug'orishda suv tekamkor texnologiyalarini loyihalash va undan foydalanish.

Vazifasi: Sug'orish uchun mo'ljallangan suvni kerakli hajmda, kerakli muddatlarda sug'orish manбайдan olib, sug'orish tizimlari yordamida ekin dalalariga yetkazib berishni loyihalashtirishdan iborat.

Tomchilatib sug'orish lentalarini loyihalash

1-rasm. Tomchilatib sug'orish lenta sxemasi

1

$$d = \frac{(T_k - S_n)}{100\%} * \gamma_t * D \quad (\text{tuproqning suv ushlab turish qobiliyati, 1-formula})$$

2

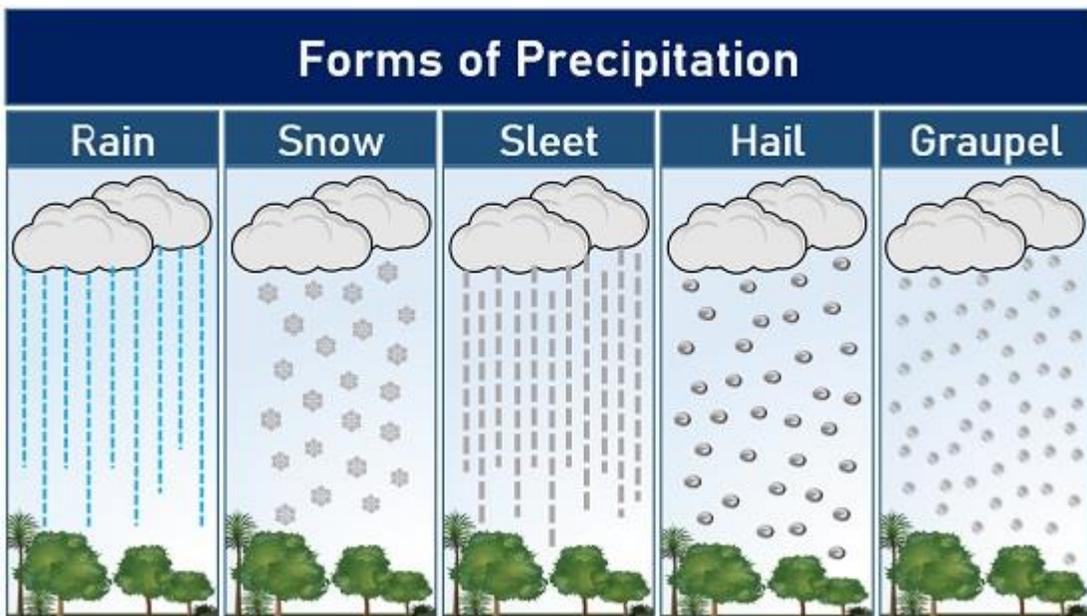

$$S_d = 0.9 * \sqrt{\frac{Q}{I}} \quad (\text{emitter oralig'ini aniqlash, 2-formula})$$

Q-emitterning suv sarfi l/s

I-infiltratsiya tezligi mm/soat

№	Tuproq turi	Infiltratsiya tezligi, MM/COAT	O'rtacha infiltratsiya tezligi, MM/COAT
1	Qumli tuproq	25-250	50
2	Yengil qumoq	13-76	25
3	O'rta qumoq	8-20	13
4	Og'ir qumoq	2.5-15	8
5	Gilli tuproq	0.3-5	2.5

Tomchilatib sug'orish lentalarini loyihalash

3

$$P = k * S_d / S_e \text{ maydon koeffitsienti}$$

k - Ekin ildiz koeffitsient 1 ga teng

S_d -emitter oraliq'i, (yuqorida topilgan)

S_e -tomchilatib sug'orish lentasi

No	Yog'ingarchilik miqdori, mm	P
1	0<360	0.35
2	360<750	0.3
3	750<	0.25

Tomchilatib sug'orish lentalarini loyihalash

Quvurlarda napor yo'qolishi

I Magistral

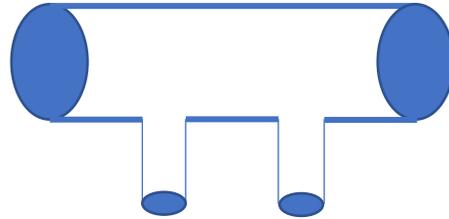

4

$$h_l = \frac{\lambda \cdot l}{d} \cdot \frac{v^2}{2g}$$

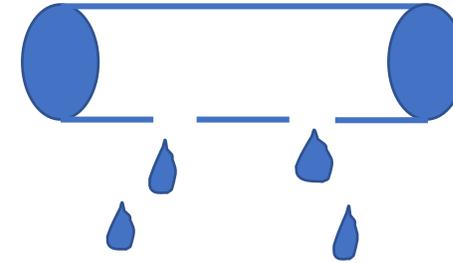

Darsi Veysbah

h_l = napor yo'qolishi (m);
 L = uzunlik (m),
 λ = gidravlik ishqalanish koeffitsienti,
 V = oqim tezligi (m/s),
 g = erkin tushish tezlanishi (9.81 m/c²)
 d = ichki diametr (m).

II tarqatuvchi

III tomchilatib sug'orish lentas

$$h_l = \frac{10,67}{C^{1,852}} \cdot \frac{Q^{1,852}}{d^{4,8704}} \cdot L;$$

Xazan Villiams

h_l = napor yo'qolishi (m);
 L = masofa (m),
 d = ichki diametr (m).
 Q = suv sarfi (m³/c)
 C = shezi koeffitsienti

Nasos tanlash

5

$$H(\text{nasos}) = h(\text{lateral}) + h(\text{manifold}) + h(\text{magistral}) + h(\text{filtr})$$

Mustahkamlash uchun amaliy masala

Ma'lum bir hududda 4 gektar paxta ekilishi uchun mo'jallangan maydon mavjud, paxta dalasiga to'liq tomchilatib sug'orish tizimini loyihalash lozim. Mavjud maydon uchun tomchilatib sug'orish lentasi oraliqlarini aniqlash $S(l)$ va nasos uchun kerakli bosimni topish $H(\text{nasos})$ lozim.

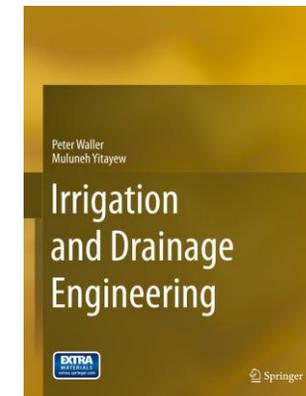

S_l - ???

$H(\text{nasos})$ - ???

Maydon	4 gektar
Magistral quvur	160 mm (300 m)
Tarqatuvchi quvur	110 mm (250 m)
Tomchilatib sug'orish lentasi	1,6 l/soat (120 m)
Tuproq turi (o'rta qumoq) infiltratsiya tezligi	8 mm/soat
Tk maydon chegaraviy dala nam sig'imi	33,9%
S_n so'lish nuqtasi	18,99%
Y_t Tuproq solishtirma og'irligi	1.28 gr/sm ³

Qo'shimcha topshiriqlar

1. Shevelyov dasturini o'rnatish
2. Irrigation and drainage kitobidaning 40-48 betlarini o'qib o'rganish
3. <https://hemis.tiame.uz/> web saytidagi misollarni ishlash
4. O'tilgan darslarni takrorlash

Qo'shimcha topshiriqlar

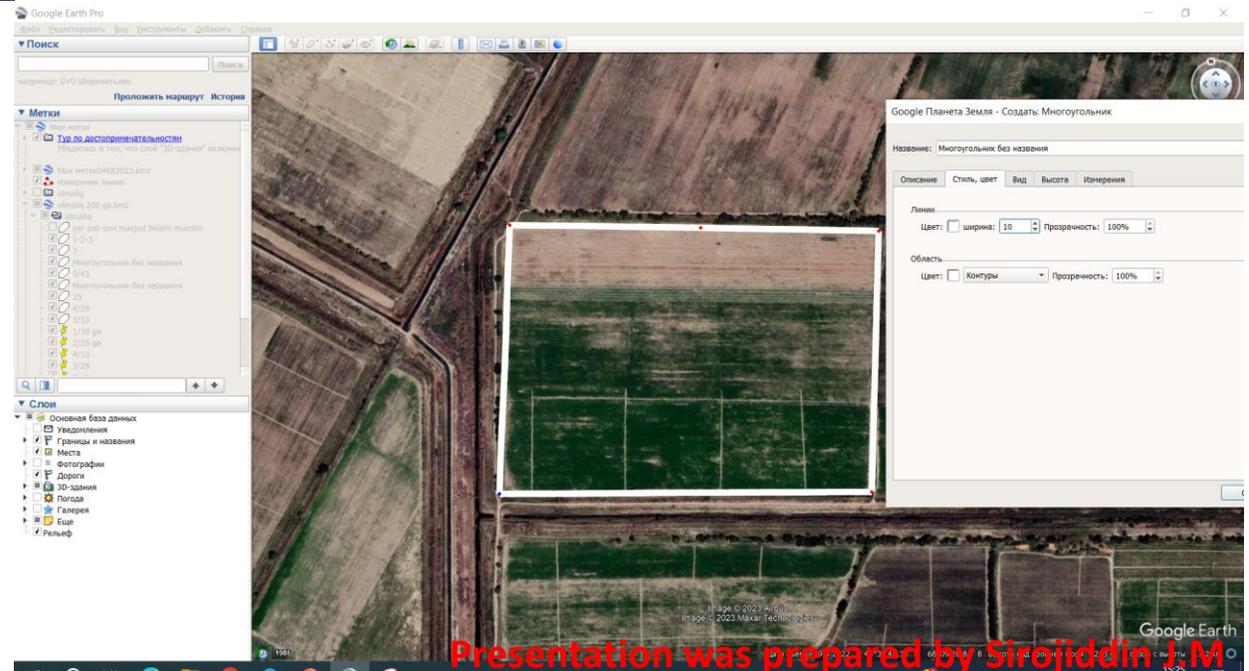

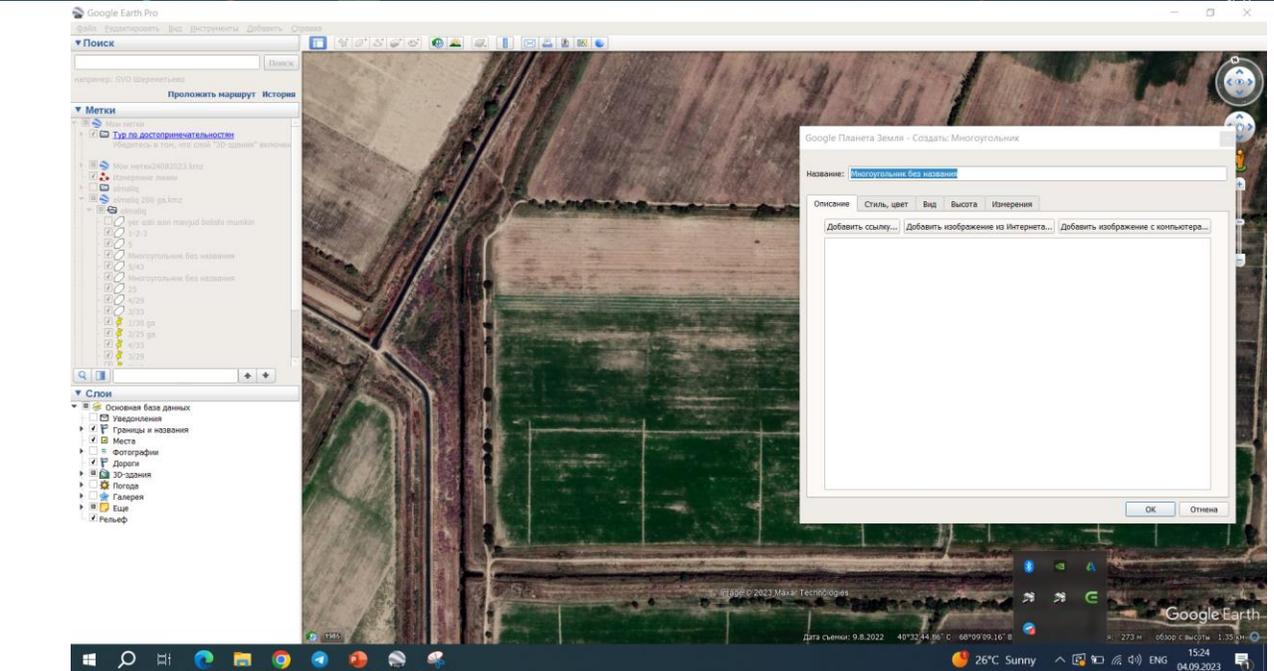

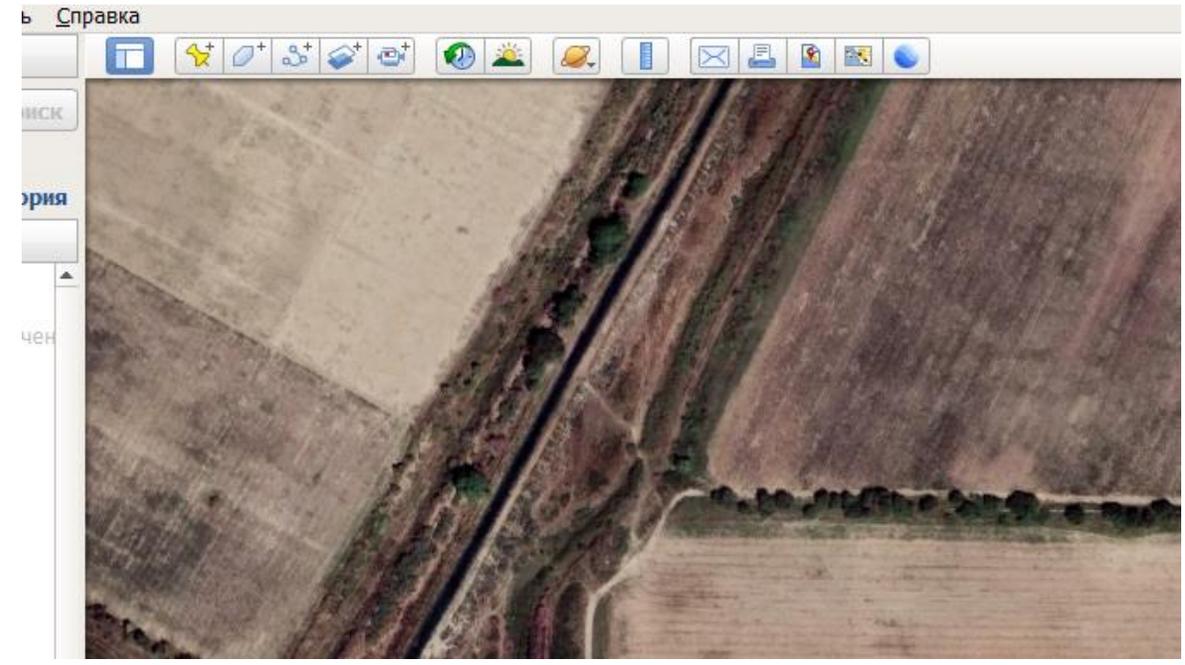

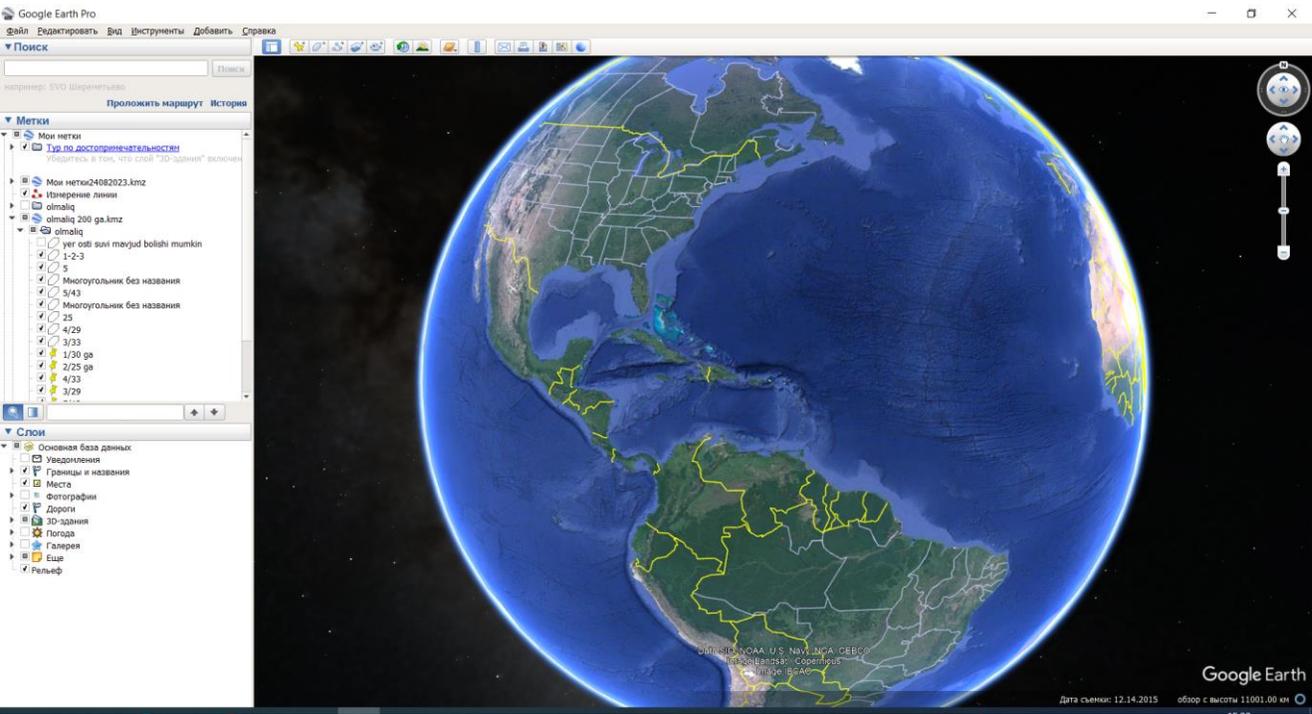

1. Google earth – dasturini yuklab olish va o'rnatish

1/1 Google earth dasturi yordamida maydonlarning chetki qismlarini belgilash

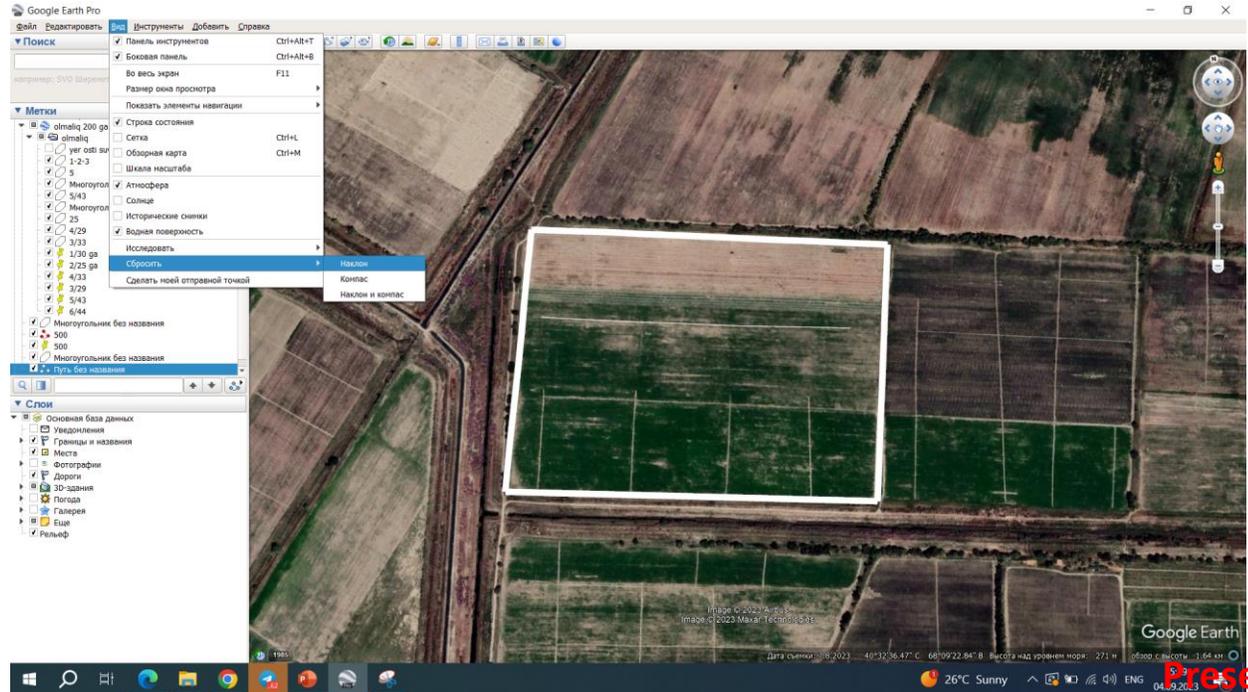

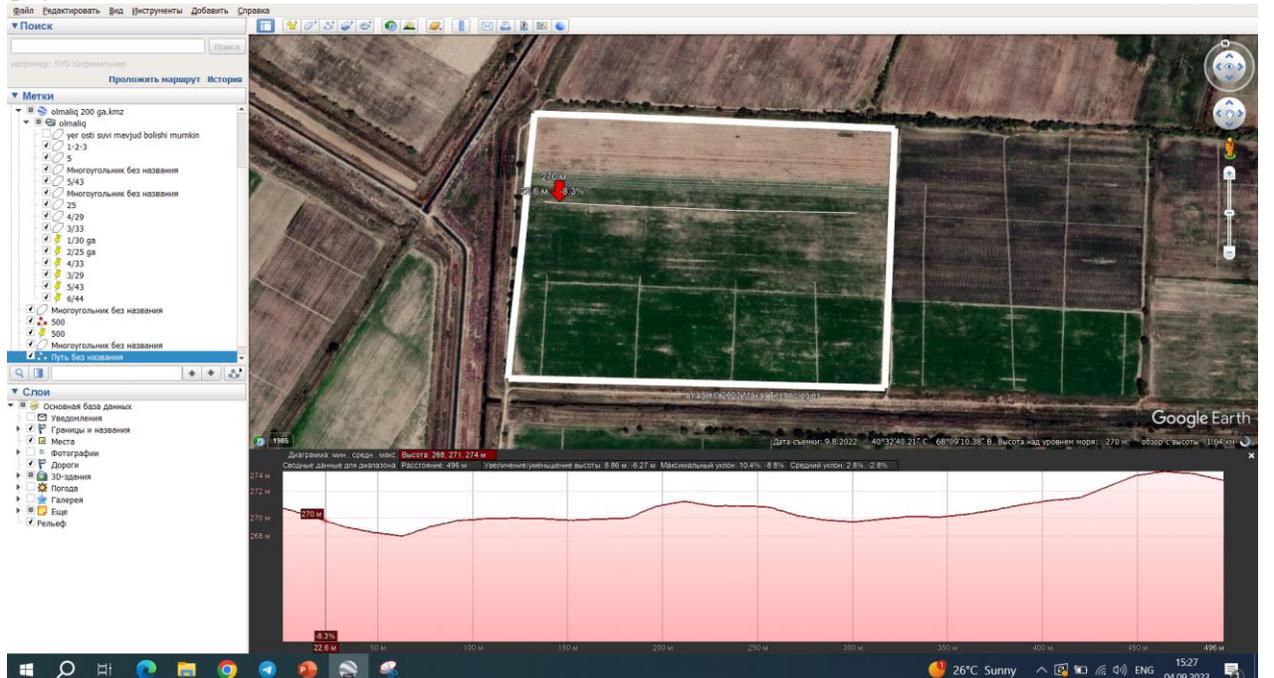

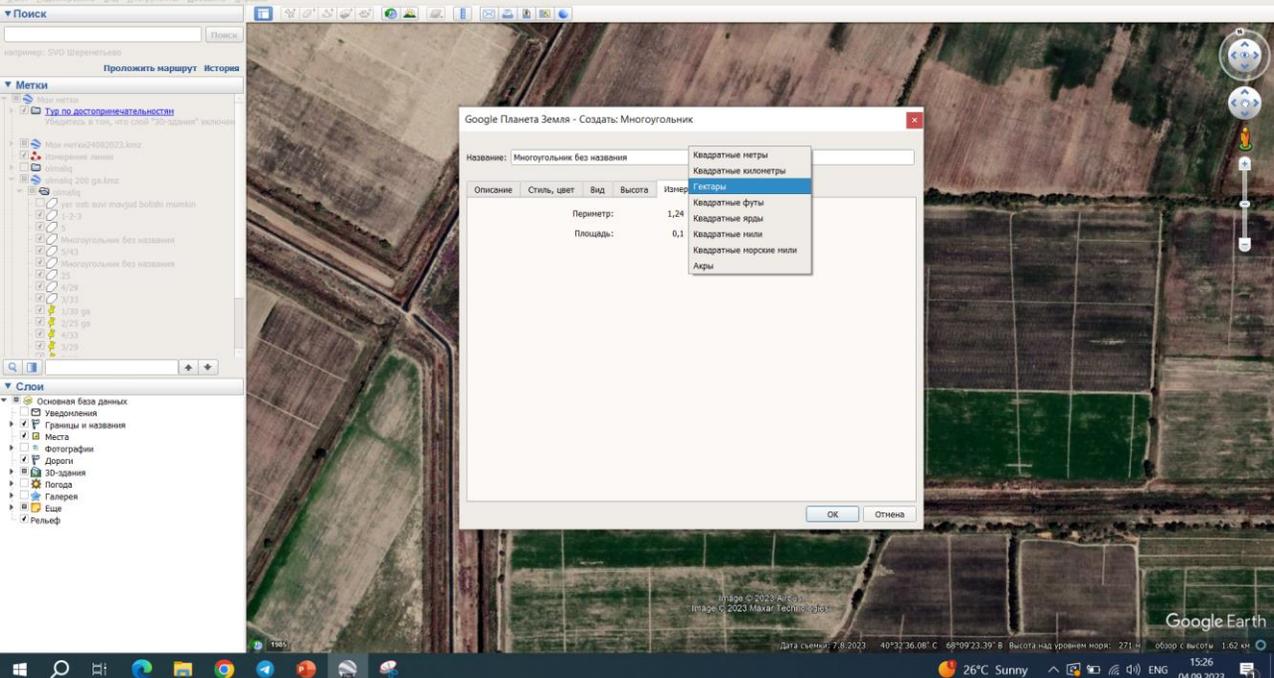

1/2 Google earth dasturi yordamida masofalarni o'lchash

1/3 Google earth dasturi yordamida maydon kengligini o'lchas
