

The aral sea disaster - the classical example of the result of the anthropocentric approach

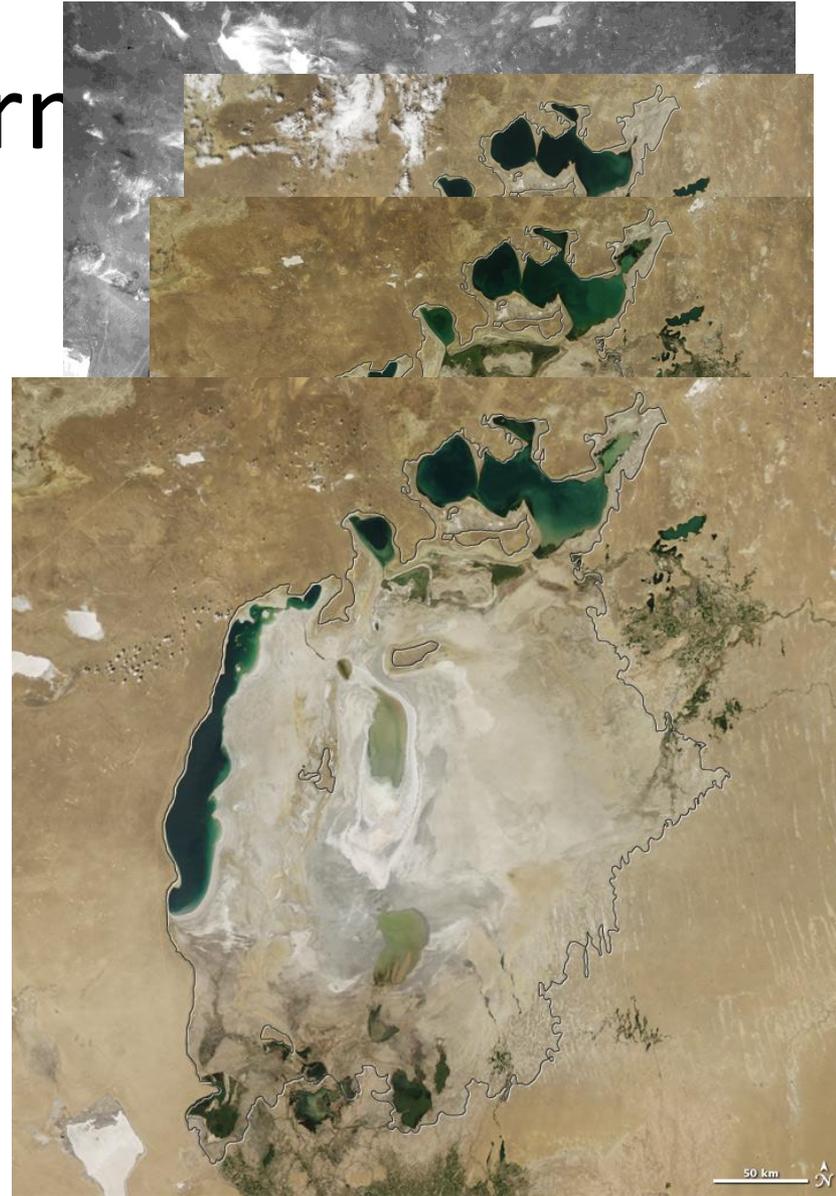

Module: ENVIRONMENTAL ETHIC
Supervisor: prof. Thomas Heyd
Students: Sobir Kodirov
Anna Paranina

outline:

- General information about the Aral Sea;
- The reasons for the desiccation;
- Why we think this is an ethical issue?
- The consequences of drying of the Sea on the environment;
- Some solutions and ideas on mitigation of consequences;
- References;

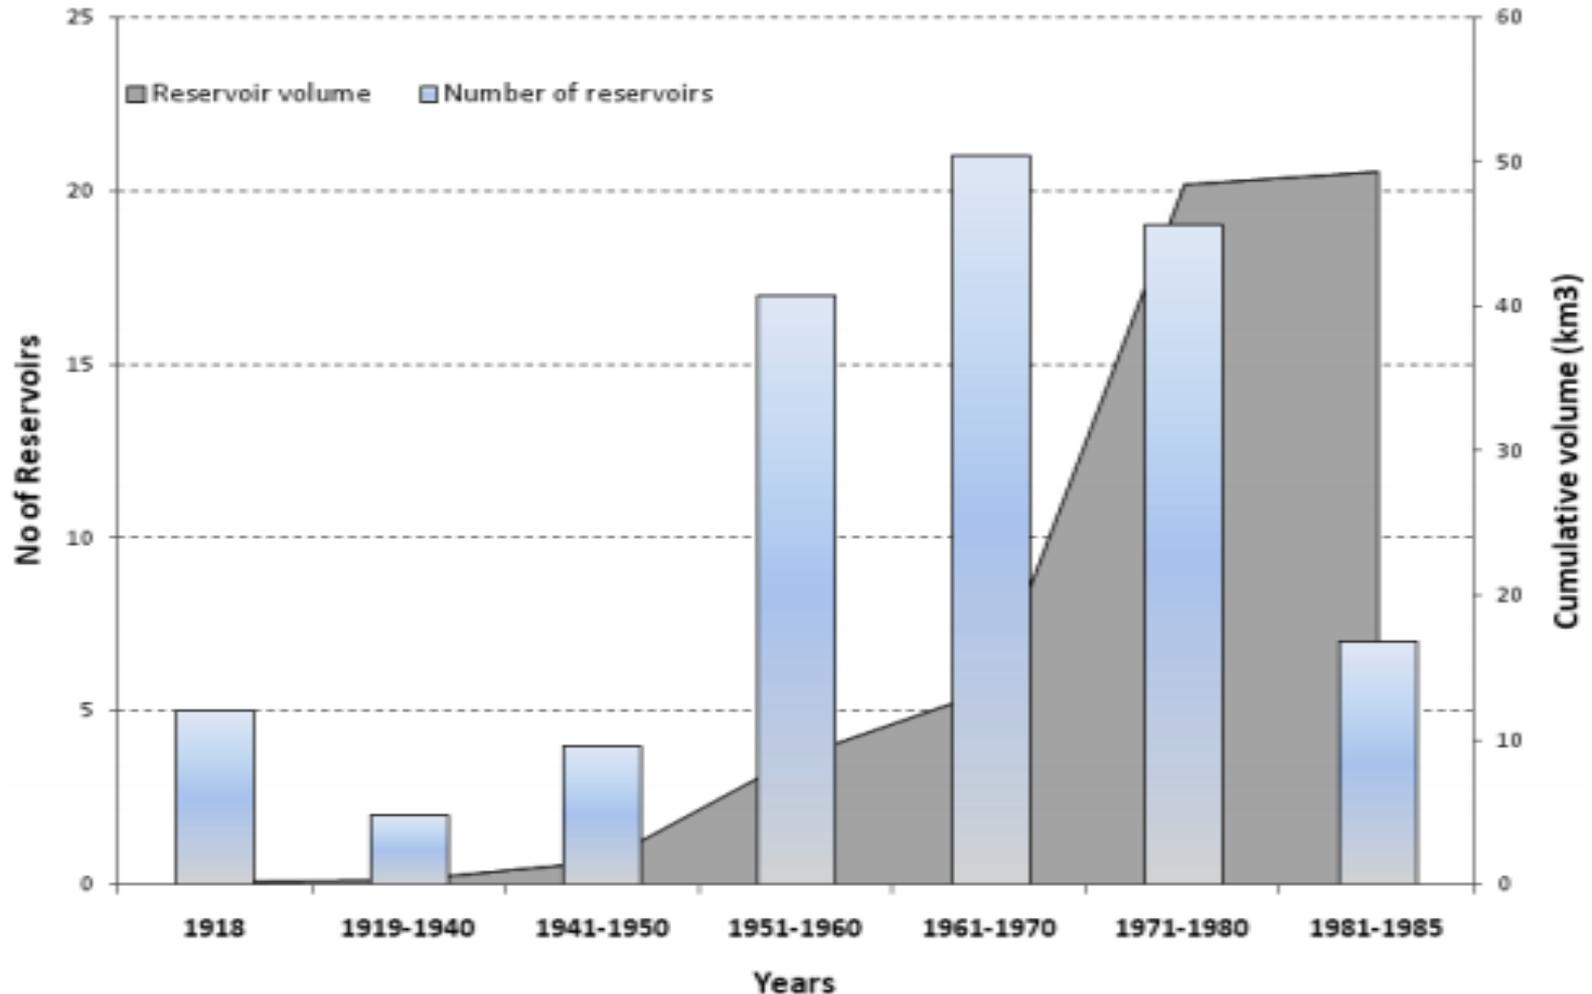

General information

- The Aral Sea was formerly one of the four [largest lakes](#) in the world;
- In 1960, sea level was 53.4 m, area 68,000 km², volume 1090 km³, average depth 16 m, and average salinity near 10 g/liter;
- Formed after merging The Amudarya River and The Sirdarya River in Kizilkum desert;
- Located between two CA countries – Uzbekistan and Kazakhstan;

The reasons for drying:

- During the 20th century more than 60 water reservoirs were built mainly for irrigation of new developed cotton fields;

Why we consider this as a ethic issue?

- Because in this specific case Human being whose well-being is assumed to be the summum bonum;
- By ignoring all other species;

The consequences of desiccation on the environment:

- Water balance changed;
- Exposed bottom of the Sea causing to salt and dust storms;
- 20 out of 24 fish species disappeared;
- The biggest canneries at Aralsk and Muynak in CA closed;

Some ideas and solutions to mitigate the consequences:

- Gradually shifting of crop to which require less water;
- Improvement of irrigation systems;
- Seeding plantations to prevent salt and dust storms;
- Highlighting ecological problems and their consequences in education systems with the particular emphasis on water usage;
